ABSTRACT

Starting something of your own is never easy. It takes more than just an idea, it takes learning, trying, failing and growing. This web-based platform was created to celebrate exactly the learning journeys of Indian entrepreneurs. It's a space that focuses not just on where they ended up, but how they got there through curiosity, courage and a whole lot of learning along the way. Every story shared here is different. This platform brings all those stories together, showing that there's no single right way to grow only your way. And whatever your path looks like it's valid, important, and worth telling. Through these real-life experiences, readers get to see the human side of entrepreneurship, the struggles, the lessons, the mindset shifts, and the ongoing process of becoming better. This platform is for anyone who's ever thought, Learning is part of the journey. And the stories here prove that with patience, effort, and a hunger to grow, you can build something meaningful just like they did. This platform is a tribute to learning in all its forms. It reminds us that entrepreneurs aren't born; they're made through knowledge, experience, and the will to keep going.

Keywords: *entrepreneur, professional journey, insights, startup, innovation*

I. INTRODUCTION

It shares stories of people who didn't know everything at the start but kept asking questions and seeking answers. They learned how to handle money, talk to customers, build teams and face problems head-on. Each story reminds us that growth doesn't happen overnight; it happens step by step, with patience, mistakes, and effort. The platform is simple, easy to navigate, and full of stories that feel real and relatable. It connects readers with people who are just like them dreamers, learners, and doers. It helps them see that even the most successful businesses started with a curious mind and a willingness to learn something new every day .What makes this platform truly special is its honesty. It doesn't sugarcoat the journey. It talks about the tough days, the failures, the doubt and how people

In every corner of India, from small towns to big cities, people are dreaming of building something of their own. Some have bold business ideas, while others just want to solve everyday problems in new ways. What they all have in common is a journey of learning figuring things out, making mistakes, growing stronger and becoming wiser along the way. This is where a special web-based platform comes in. It's a space created to shine a light on the real and honest learning journeys of Indian entrepreneurs. It doesn't just talk about success or profits it focuses on how these individuals got there. It's about the knowledge, challenges they faced

Not every entrepreneur starts with a business degree or loads of experience. Some begin with a simple idea and a lot of questions. They learn by doing, by reading, by listening and often by failing. This platform brings all those stories together. It's like a digital diary of people who dared to try, kept learning, and turned their lessons into something meaningful. Some of the entrepreneurs featured on the platform learned from school or college. Others picked things up through self-study, working in the field, or just paying attention to the world around them. The platform doesn't favor one path over another; it celebrates all of them. Because in the end, what matters is not where you learned, but what you learned and how you applied it.

found their way through. It shows that behind every confident entrepreneur is a person who once didn't have all the answers but kept going anyway. III introduces the system architecture and Section IV discusses implementation aspects such as AI models and integration with the cloud. In Section V, experimental results are presented, and compared, in Section VI, with AI based training as opposed to traditional This platform isn't just about business. It's about personal growth. It's about mindset, determination, and the small wins that build big dreams. It's about learning not just from books, but from people, from practice, and from everyday life. So, if you've ever wondered how people make it from idea to reality, or if you're on your own journey and need a little push this platform is for you. It

International Journal of Information Technology & Computer Engineering
ISSN 2347–3657
Volume 13, Issue 2, 2025

reminds us that education isn't only found in classrooms. It's in conversations, in choices, and in every challenge we face.

In simple words, it's a place where learning meets courage, and where ordinary people become extraordinary through knowledge, resilience, and heart. It tells us that with the right attitude and a hunger to learn, anyone can grow and anyone can lead.

II. RELATED WORK

There are currently a number of platforms that assist and encourage Indian business owners, each with a unique function. Personalized storytelling and entrepreneur showcases are absent from the Startup India Portal, a government initiative that provides a variety of resources and networking tools. Although it is more content-driven than interactive, Your Story is a well-known digital media platform that shares success stories of Indian startups. Though they do not provide a curated space specifically suited to Indian entrepreneurial journeys, platforms such as LinkedIn host professional profiles and communities for entrepreneurs. In a similar vein, Tie (The Indus Entrepreneurs) and NASSCOM's 10,000 Startups prioritize mentorship, funding, and incubation over building an online directory of individual business owners. These platforms draw attention to the expanding ecosystem, but they also point out a weakness: there isn't a single, interactive, web-based platform specifically designed to visually

III. PROPOSED SYSTEM

A. Overview of the Proposed System:

The proposed system for the entrepreneur journey website is crafted to be an engaging and informative hub that highlights the diverse life stories, education, and business paths of various entrepreneurs. Picture a vibrant home page showcasing featured profiles, along with a robust search and filtering system that makes browsing a breeze. Each entrepreneur will have their own dedicated profile page, complete with their biography, a timeline of significant milestones, achievements, and multimedia elements like interviews or videos. There will also be an explore section where users can find entrepreneurs based on themes such as industry, innovation, or social impact, with a special spotlight on areas like "Innovative Startups" that leads to a deeper dive on a separate page. The goal of this system is to inspire and educate by presenting these journeys in a well-organized, visually appealing, and user-friendly way.

B. Overall System Architecture:

Fig.1 illustrates a cloud-based adaptive learning system, structured into core system components, a cloud-based infrastructure, and an integration & analytics layer. The Core System Components consist of three modules: Data Collection Module, AI Processing Engine, and Adaptive Learning Module. The Data Collection Module gathers performance data, engagement metrics, and the homepage will contain a description about the purpose of the website, an easy to navigate section for featured stories, and navigation buttons. From the organized "Explore" section, users will be able to view a wide collection of entrepreneurs where profiles are organized by industry, region, or impact area. Every entrepreneur will have a dedicated page that outlines their journey in detail, which includes early life, education, business milestones, challenges faced, key achievements, and quotes or personal insights. There will also be a search and filter function incorporated into the website so that users may find specific profiles or topics of interest swiftly.

C.User Interface:

The platform's user interface, which has a simple and easy-to-use design, serves as the primary point of interaction for users. Because it is a responsive web application, it functions flawlessly on PCs, tablets, and smartphones. An interactive map of India greets users on the interface, promoting visual exploration

International Journal of Information Technology & Computer Engineering
ISSN 2347–3657
Volume 13, Issue 2, 2025

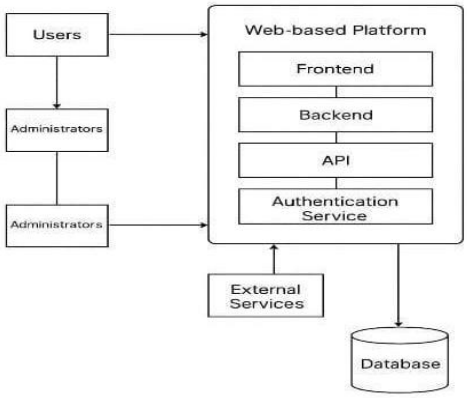

Figure. 2. System Architecture of Web-Based Platform showcasing Indian Entrepreneurs.

D
. Interactive Map:
Central to the system is the interactive map, which acts as the main navigation device. Every state and union territory is represented visually and made clickable, enabling users to choose a particular region to learn about entrepreneur stories from that region.Upon the selection of a state, the system picks up and displays entrepreneur information corresponding to that area. The information is usually their name, societal contributions.

F. Java script (JS):
The javascript is likely responsible for the interactive functionality of the map letting
The users retrieve the entrepreneur's information.java script is a popular programming language used to create creative interactive websites.events in the java script such as dragging, hovering helps to update the interface with the relevant entrepreneur's details.

B. API integration:
API integration has a straightforward but vital role to bridge the frontend with external data or a service. As there is no backend framework, JavaScript on the client side is employed to transmit and receive data via APIs, usually with the fetch() method. For instance, if the entrepreneur data is hosted on an external server or a third-party provider, the site can issue a GET request to such an API and reflect the information dynamically on the screen without requiring a page refresh. In the same way, in cases involving user credentials or feedback forms, POST requests may be issued in order to post the data securely. This enables the site to be light but capable of accessing dynamic pages, refreshing parts of the page in real time, and maintaining the user interface as smooth and responsive.

C. Performance Evaluation:
The HTML, CSS, and JavaScript built site provides a smooth, easy performance that is user-friendly and accessible. The simplicity of structure offered by HTML facilitates simple management of content, and CSS adds visual beauty, helping to create a seamless experience for the users. JavaScript provides interactive features without overloading the performance, enabling smooth transitions and dynamic capabilities. The light weight of these technologies, when optimized, guarantees quick loading and low resource consumption, making the site efficient and responsive on different devices and browsers. Overall, it offers a seamless browsing experience to users while being highly functional.

IV. MODULE SPLIT-UP

1. User Module
Purpose:
Allows users to interact with the web-based platform to explore state-wise entrepreneur's journey.
Functionalities:
- View the interactive map of India
- Hover over a state to see a popup with the entrepreneur's name and what he is known for
- Click a state to navigate to a detailed entrepreneur information page.

Technologies Used:
- HTML for structure
- CSS for styling and hover effects
- JavaScript for popups and navigation

Inputs:
- Mouse hover or click on a state/hover

Outputs:
- Popup showing sport info
- Redirection to entrepreneur's detail page

2. Admin Module
Purpose:
Enables authorized personnel to update or add state-wise entrepreneur's profile information.
Functionalities:
- Add a new entrepreneur entry for a state

International Journal of Information Technology & Computer Engineering
ISSN 2347–3657
Volume 13, Issue 2, 2025

- Edit or update entrepreneur's name, details, or page link
- Maintain accuracy of content

Technologies Used:

- Manual HTML page updates (in current implementation)

Outputs:

- Updated HTML pages and data entries

3. System Module

Purpose:

Coordinates the interaction between user actions, data storage, and content display.

Functionalities:

- Render India map with defined <area> regions
- Detect user events (hover/click)
- Fetch and display sport data dynamically
- Route to appropriate HTML pages

Components:

- Frontend (HTML/CSS/JavaScript)
- Asset directories for icons and images

Inputs:

- State click/hover event

Outputs:

- Visual interaction (popup, redirection)
- Sport information display

V. ALGORITHM

Step 1: Start Application

- The user launches the web application

Step 2: Load Interface

- Display the main graphical interface containing:
  - An interactive map of India with each state visually marked.
  - A display panel or section to show entrepreneurs - related information.
- Ensure the map is interactive, responsive, and supports mouse and touch events.

Step 3: Wait for User Interaction

- Monitor the interface for user input, such as:
  - Mouse hover (desktop)
  - Click or tap on a state

Step 4: Hover Interaction

- If the user hovers the mouse or touches and holds over a state:
  - Display a tooltip or popup near the state showing:
    - Name of the state
    - entrepreneurs associated with the state (brief info)
- This provides a quick preview without changing the screen.

Step 5: Click Interaction

- If the user clicks or taps on a specific state:
  - Fetch detailed sport information linked to that state.
  - Display the following in a separate section or modal:
    - State name
    - Entrepreneur name
    - Descriptions
    - Images

Step 6: Repeat Interaction

- Allow the user to:
  - Hover or click on any other state
- Ensure smooth transitions between views.

Step 7: End

V. IMPLEMENTATION

A. Show Home page:

The platform's home page is where users begin their visit. It should have a simple, user-friendly layout with an eye-catching interface that centers on an interactive map of India. Along with navigation buttons, search capabilities, and perhaps featured entrepreneurs or success stories to draw visitors in right away, the homepage may also provide a succinct overview of the platform's goal, which is to highlight business owners from various states.

B. User Initiation:

Users are prompted to interact with the map when they arrive at the home page. The platform dynamically retrieves and presents a carefully curated list of entrepreneurs from a given state when a user clicks on it. Localized exploration is made possible by this state-specific filtering, which enables users to discover significant personalities from their own or other states. To improve the user experience, this interaction should be smooth and accompanied by animations or transitions.

B. If User Clicks on a pop-up:

After the pop-up from a state are displayed, the user can click on any individual Entrepreneur's name or profile card to learn more. This action should link to a detailed page or popup modal that provides rich content about the Entrepreneur, including educational details, their career path, notable accomplishments, and pictures (as well as interviews or other media, if available). The goal is to provide a motivating and informative biography that reflects the spirit of their success and contribution.

C. End:

Once the user has navigated the information, the experience may end or loop back, allowing them to go back to the map or other entrepreneurs. This "end" does not mean to exit the app, but rather marks the end of a completed full interaction cycle. Having clear navigation buttons, like "Back to Map" or "Explore More," will facilitate transitions and continued use.

VI. RESULTS

Fig.3: web-based platform that showcases entrepreneur's journey

The figure 3 shows the home page where on the content side of the website the user will be able to see the welcome text and a small thought about to become entrepreneurs which helps to engage to the users and on the right side, we could get the interactive India map which is clickable.

Fig. 4: To hover on the india map to get the instant information of entrepreneur

One small interactive element on the site is an India map on which, upon mousing over various states or regions, a popup shows the name of a highlighted entrepreneur from that region and what they are famous for. This provides a visual and interesting means for users to browse through the paths of entrepreneurs geographically.

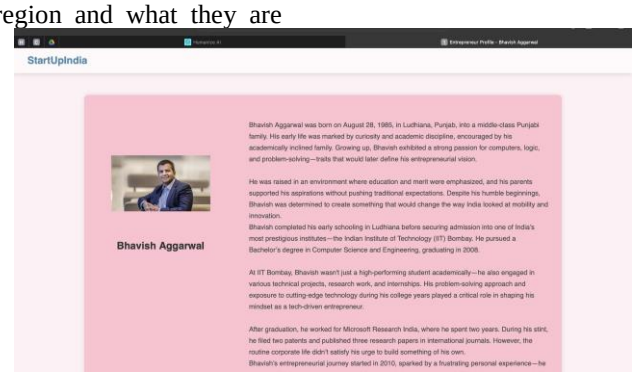

Fig.5: journey of an entrepreneur

the website also enables users to click on a popup, which then forwards them to a specific page that has in-depth information about the chosen entrepreneur. The page has their biography, accomplishments, setbacks, and

International Journal of Information Technology & Computer Engineering
ISSN 2347–3657
Volume 13, Issue 2, 2025

contributions and provides an in-depth view of their life.

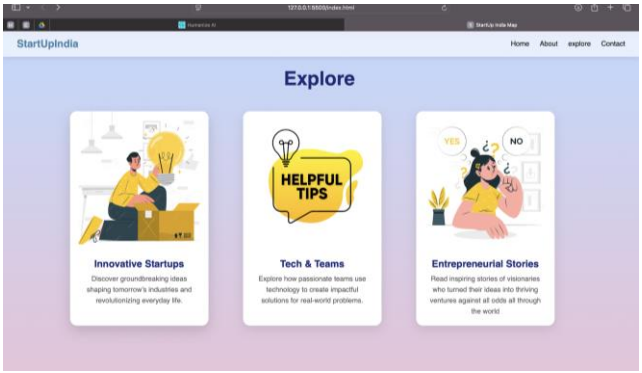

Fig. 6: explore section

The Explore page of the website is a dynamic space where one can surf across different types of entrepreneurs on the basis of parameters such as industry, innovation, impact, or geography. It has visually pleasing cards or tiles, each corresponding to an entrepreneur or a tag, like "Innovative Startups" or "Social Entrepreneurs."

VII. CONCLUSION

Our website is all about shining light on entrepreneurs—their stories, their tips, their journeys, and everything they have to offer. It's more than just a marketplace. We've built a space that puts the spotlight on real people and their unique paths, helping them connect with potential customers, investors, and collaborators in a genuine way. As we move forward, we're excited to offer a smooth, modern experience that's easy to use. With interactive profiles, simple navigation, and a friendly interface, our platform makes it easy for entrepreneurs and visitors to discover, connect, and grow together. Whether you're just starting out or looking to take your business to the next level, we're here to support and grow alongside you That's why we're not just about business. We're about the journey. The late nights, the hard lessons, the small wins that mean everything. We share real voices, honest insights, and hard-earned wisdom because when we open up, we lift each other up. On our platform, entrepreneurs show up as they are with purpose Investors and customers discover ideas that are driven by something deeper. We've built a space that feels less like a platform and more like a community. Simple to use. Beautiful to look at. And inspiring to explore. Because when it's easy to connect, it's easier to grow.
